That's why you've been sent to the back of the room, Kramer, spending too much time on the floor. Of course, this is another stunning non-responsive squeak from the famed "professional skeptics".

You're not the only one laughing.

MH

To hear MH speak of TRUTH makes me fall off my chair in laughter.

Jim,

Thanks for so clearly and reasonably explaining those points. That Meier has long since tired of the amateur "debunkers" and their fearful and malicious efforts to prevent their paradigms from imploding is painfully obvious. Likewise, that they continue to attempt to slander persons associated with the case brands them forever as banal guttersnipes for whom truth is a nasty inconvenience.

As usual, no response, let alone rebuttal, to the clear, factual expository and conclusion that Mr. James Randi is a scurrilous liar and fraud.

Dave, let me add my two cents here, also.

That science writer who wrote the article in:
<http://www.ufo.net/ufodocs/text.documents/u/ufo-art1.txt>
wasn't allowing any alternative explanations to be heard.
Wendelle Stevens
appears to have been under strict orders to not speak out
on just what
happened that day, and it was, or would have been, simple
for underground
military/governmental agents who were involved in keeping
important UFO
events covered up or marginalized to drum up false
charges to which Stevens
would have to plea-bargain in order to avoid a life
sentence. All that most
of us know is that he had apparently allowed some
neighbor girls to skinny
dip in the swimming pool in his back yard. He is not
known to have been
involved in any sexual offenses before then, or since
then. Only if a
science writer is ignorant about the reality of the UFO
phenomenon and of
how seriously those in the government who are "in the
know" feel about it,
would he not know their need to get some sort of hold
over Stevens by which
they could falsely discredit him. This side of the story
was entirely left out.

And Davidson used pejorative language such as unjustifiably calling Meier's reports "tales"; he falsely stated that Meier had said that the UFOs he had photographed resembled hub-caps, while it was some others who said that, who seemed never to wonder why the "hubcap" was nearly as wide as the width of the abies-alba fir tree about which it had hovered and posed on all sides, which fact Davidson, if he knew about it, stayed silent on; he said that the tape-recorded (beamship) sounds by Meier (in the presence of many witnesses to it and to its extremely great intensity) resembled sound effects from old science-fiction films, which is patently untrue; and so on. It just doesn't do science any justice to trot out a totally biased account like that of Davidson's.

Regarding what Billy Meier was told about tachyons, or what he was told about who-all have been contacted by ETs and who have not, don't forget that there Billy is just repeating what he learned from his ETs. Some of what he learned may have been misinformation, designed to be passed on to skeptics who need some items to latch onto with which they can debunk Billy, and which may let them get by with ignoring the evidence indicating that his contacts did occur, and that his photographic data and other data are very real.

So why confuse the events of Meier's contacts for which he

collected

evidence of their presence with statements coming from his contactors? This

is another alternative that apparently did not occur to Keay Davidson --

that the key aliens involved in the UFO phenomenon are more ethical than to

want to rush our science and society into any sudden realization of their

presence and reality. It is simple then for these ETs to outwit and dupe

those scientists who know no better than to assume that everything an ET

tells his contactee must be the truth or else it must represent lies

invented by the alleged contactee.

Concerning why Michael hasn't arranged for "some real testing of the

alleged alien material(s)," I rather doubt that he would get Meier's permission for this.

That's because Meier did give quite a lot of material to Stevens for this

purpose, back around 1979-81, and if the test results from those years

weren't believed, he may feel, why would further tests be believed either?

Meier never received most of this material back, as it tended to get "lost"

one way or another. Some 25 years have since gone by, and Meier has, I

believe, long since stopped caring about any need to prove that his

contacts were and are real.

But then, if some way could be arranged for ensuring that a lab which would

do a comprehensive test would not be surreptitiously informed as to what it

was all about, and would honestly report its findings and not stay silent, then who knows -- Meier might surprise me. But who could guarantee that the lab(s) involved would not be informed on the side by one who wished to warn them that their reputations could be in very serious jeopardy if they were to write out the truth of their findings? Just like Marcel's reputation was probably besmirched by those who did not like what he had to say about the alloy sample of Meier's that he analyzed.
